Mathematical Topics in Neutron Transport Theory: New Aspects (Advances in Fuzzy Systems)
Mustapha Mokhtar Kharroubi
This book presents some recent mathematical developments about neutron transport equations. Several different topics are dealt with including regularity of velocity averages, spectral analysis of transport operators, inverse problems, nonlinear problems arising in the stochastic theory of neutron chain fissions, compactness properties of perturbed of c_0-semigroups in Banach spaces with applications to transport theory, Miyadera perturbations of c_0-semigroups in Banach spaces with applications to singular transport equations, a thorough analysis of the leading eigenelements of transport operators and their approximation, scattering theory. Besides the new problems addressed in this book a unification and extension of the classical spectral analysis of neutron transport equations is given.
