engineers into a single volume whilst concentrating on two important research control design problems: autopilots with rudder-roll stabilization and fin and combined rudder-fin stabilization. He has been guided by some of the leading marine control academics, in particular Mogens Blanke and Thor Fossen; indeed Chapters 3 and 4 on kinematics and kinetics of ship motion are jointly authored with Professor Fossen. There are some 240 cited references – an invaluable resource for interested readers. The volume is likely to appeal to a wide range of readers who will each be able to extract something different from the various parts of the monograph. Part I has some four chapters on the modelling fundamentals including kinematics, dynamics and actuators. Part II is a very useful survey of the ship roll stabilization problem and how ship roll performance is measured and assessed. This clearly motivates the human necessity for roll-reduction and roll stabilization. Parts III and IV move on to the control systems aspects of the various stabilization designs. Valuable material here includes a study of system performance limitations as caused by the presence of non-minimum phase characteristics and actuator saturation. Chapter 10 has an interesting historical review of these marine control problems stretching back some thirty-years into the 1970s.

### **From reader reviews:**

#### **Stevie Mozingo:**

The publication with title Ship Motion Control: Course Keeping and Roll Stabilisation Using Rudder and Fins (Advances in Industrial Control) includes a lot of information that you can learn it. You can get a lot of advantage after read this book. This particular book exist new understanding the information that exist in this publication represented the condition of the world currently. That is important to yo7u to know how the improvement of the world. That book will bring you in new era of the internationalization. You can read the e-book with your smart phone, so you can read the item anywhere you want.

#### **Debbie Jackson:**

This Ship Motion Control: Course Keeping and Roll Stabilisation Using Rudder and Fins (Advances in Industrial Control) is great guide for you because the content and that is full of information for you who else always deal with world and also have to make decision every minute. This book reveal it info accurately using great plan word or we can claim no rambling sentences in it. So if you are read it hurriedly you can have whole facts in it. Doesn't mean it only provides straight forward sentences but challenging core information with lovely delivering sentences. Having Ship Motion Control: Course Keeping and Roll Stabilisation Using Rudder and Fins (Advances in Industrial Control) in your hand like getting the world in your arm, information in it is not ridiculous one particular. We can say that no book that offer you world with ten or fifteen small right but this book already do that. So , this can be good reading book. Heya Mr. and Mrs. active do you still doubt that will?

#### **Gary Williams:**

The book untitled Ship Motion Control: Course Keeping and Roll Stabilisation Using Rudder and Fins (Advances in Industrial Control) contain a lot of information on that. The writer explains your girlfriend idea with easy method. The language is very easy to understand all the people, so do certainly not worry, you can easy to read this. The book was compiled by famous author. The author will bring you in the new period of literary works. It is easy to read this book because you can read more your smart phone, or program, so you can read the book in anywhere and anytime. In a situation you wish to purchase the e-book, you can start their official web-site and order it. Have a nice learn.
