## Conservation status of exploited endangered species, Mount Kenya: Utilization and Conservation Status of rare endemic species tree and liana species REBECCA KARANJA

Encroachment of people Kenya forests for illegal farming, grazing and charcoal burning is rampant. This study analysed impact of exploiting *Ixora scheffleri* ssp. *keniensis* a globally rare locally endemic tree recorded to occur in Ragati forest only and a near-endemic tree *Vepris glandulosa*. Conservation status of liana species used in basketry namely *Rourea thomsonii*, *Hippocratea* sp. cf. *africana* and *Dalbergia lactea* was analysed. Data gathered indicate rarity of study plants is a direct result of over-exploitation in the past. *Rourea*, *Dalbergia* and *Ixora* had high numbers of seedlings and saplings compared to the mature individuals. *Vepris* and *Hippocratea* had few individuals in middle sized classes thus in future there may be no mother plants to perpetuate their population. Gathering effort of lianas for basketry has increased leading to an increase in prices of liana crafted baskets since it takes about 22 years for lianas to reach maturity. This book will be especially useful to people interested in ecology and conservation of rare endemic species such as university students and middle level college students, lecturers and course instructors, researchers and research consultants.
