Mathematical Ecology of Populations and Ecosystems

John Pastor

Mathematical Ecology of Populations and Ecosystems John Pastor
Population ecologists study how births and deaths affect the dynamics of populations and communities, while ecosystem ecologists study how species control the flux of energy and materials through food webs and ecosystems. Although all these processes occur simultaneously in nature, the mathematical frameworks bridging the two disciplines have developed independently. Consequently, this independent development of theory has impeded the cross-fertilization of population and ecosystem ecology. Using recent developments from dynamical systems theory, this advanced undergraduate/graduate level textbook shows how to bridge the two disciplines seamlessly. The book shows how bifurcations between the solutions of models can help understand regime shifts in natural populations and ecosystems once thresholds in rates of births, deaths, consumption, competition, nutrient inputs, and decay are crossed.

Mathematical Ecology is essential reading for students of ecology who have had a first course in calculus and linear algebra or students in mathematics wishing to learn how dynamical systems theory can be applied to ecological problems.

From reader reviews:

Linda Hupp:

Throughout other case, little men and women like to read book Mathematical Ecology of Populations and Ecosystems. You can choose the best book if you want reading a book. Provided that we know about how is important a book Mathematical Ecology of Populations and Ecosystems. You can add knowledge and of course you can around the world by the book. Absolutely right, since from book you can understand everything! From your country until finally foreign or abroad you can be known. About simple point until wonderful thing you can know that. In this era, we are able to open a book or even searching by internet unit. It is called e-book. You should use it when you feel uninterested to go to the library. Let's learn.

Diana Ham:

The book Mathematical Ecology of Populations and Ecosystems can give more knowledge and also the precise product information about everything you want. Why must we leave a good thing like a book Mathematical Ecology of Populations and Ecosystems? Some of you have a different opinion about book. But one aim in which book can give many details for us. It is absolutely suitable. Right now, try to closer using your book. Knowledge or details that you take for that, you may give for each other; you are able to share all of these. Book Mathematical Ecology of Populations and Ecosystems has simple shape however, you know: it has great and massive function for you. You can appearance the enormous world by start and read a book. So it is very wonderful.

Jeffrey Haller:

That e-book can make you to feel relax. This specific book Mathematical Ecology of Populations and Ecosystems was multi-colored and of course has pictures on the website. As we know that book Mathematical Ecology of Populations and Ecosystems has many kinds or genre. Start from kids until adolescents. For example Naruto or Investigator Conan you can read and think you are the character on there. So , not at all of book usually are make you bored, any it can make you feel happy, fun and chill out. Try to choose the best book for you personally and try to like reading that will.

Mike Huey:

A lot of reserve has printed but it differs from the others. You can get it by world wide web on social media. You can choose the best book for you, science, amusing, novel, or whatever by simply searching from it. It is referred to as of book Mathematical Ecology of Populations and Ecosystems. You'll be able to your knowledge by it. Without making the printed book, it could possibly add your knowledge and make an individual happier to read. It is most essential that, you must aware about reserve. It can bring you from one destination for a other place.
