Heating and Ventilation: A Handbook for Architects and Engineers (Classic Reprint) C W Brabbee

Excerpt from Heating and Ventilation: A Handbook for Architects and Engineers

At the present time solid, liquid, and gaseous fuels are used for heating. Their characteristics and chemical reactions in the process of combustion are outside the scope of this text.

The computations required in detailed design of installations are treated in the second part of this work. The subdivisions of that part are as follows.

About the Publisher

Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com

This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
