**Molecular Symmetry and Group Theory: A Programmed Introduction to Chemical Applications** Alan Vincent

This substantially revised and expanded new edition of the bestselling textbook, addresses the difficulties that can arise with the mathematics that underpins the study of symmetry, and acknowledges that group theory can be a complex concept for students to grasp.

Written in a clear, concise manner, the author introduces a series of programmes that help students learn at their own pace and enable them to understand the subject fully. Readers are taken through a series of carefully constructed exercises, designed to simplify the mathematics and give them a full understanding of how this relates to the chemistry.

This second edition contains a new chapter on the projection operator method. This is used to calculate the form of the normal modes of vibration of a molecule and the normalised wave functions of hybrid orbitals or molecular orbitals.

The features of this book include:

- \* A concise, gentle introduction to symmetry and group theory
- \* Takes a programmed learning approach
- \* New material on projection operators, and the calculation of normal modes of vibration and normalised wave functions of orbitals

This book is suitable for all students of chemistry taking a first course in symmetry and group theory.

### **From reader reviews:**

#### **Todd Jacobs:**

This Molecular Symmetry and Group Theory: A Programmed Introduction to Chemical Applications are generally reliable for you who want to certainly be a successful person, why. The main reason of this Molecular Symmetry and Group Theory: A Programmed Introduction to Chemical Applications can be one of the great books you must have is actually giving you more than just simple looking at food but feed an individual with information that possibly will shock your before knowledge. This book is actually handy, you can bring it just about everywhere and whenever your conditions in e-book and printed people. Beside that this Molecular Symmetry and Group Theory: A Programmed Introduction to Chemical Applications forcing you to have an enormous of experience like rich vocabulary, giving you demo of critical thinking that we know it useful in your day task. So , let's have it and revel in reading.

#### **Patricia Vasquez:**

Reading a reserve can be one of a lot of pastime that everyone in the world enjoys. Do you like reading book so. There are a lot of reasons why people enjoyed. First reading a e-book will give you a lot of new details. When you read a reserve you will get new information simply because book is one of numerous ways to share the information or their idea. Second, examining a book will make an individual more imaginative. When you studying a book especially fictional works book the author will bring one to imagine the story how the people do it anything. Third, you could share your knowledge to other folks. When you read this Molecular Symmetry and Group Theory: A Programmed Introduction to Chemical Applications, you may tells your family, friends in addition to soon about yours publication. Your knowledge can inspire the mediocre, make them reading a publication.

#### **Cindy Moats:**

On this era which is the greater man or who has ability in doing something more are more treasured than other. Do you want to become among it? It is just simple method to have that. What you must do is just spending your time little but quite enough to enjoy a look at some books. One of the books in the top list in your reading list is Molecular Symmetry and Group Theory: A Programmed Introduction to Chemical Applications. This book and that is qualified as The Hungry Hills can get you closer in turning out to be precious person. By looking way up and review this publication you can get many advantages.

#### **Emma Anderson:**

That guide can make you to feel relax. That book Molecular Symmetry and Group Theory: A Programmed Introduction to Chemical Applications was colourful and of course has pictures on the website. As we know that book Molecular Symmetry and Group Theory: A Programmed Introduction to Chemical Applications has many kinds or category. Start from kids until adolescents. For example Naruto or Private eye Conan you can read and believe that you are the character on there. Therefore , not at all of book usually are make you

bored, any it offers you feel happy, fun and loosen up. Try to choose the best book to suit your needs and try to like reading this.
