The Science and Technologies of Whiskies

The Science and Technologies of Whiskies

World-wide contributors describe the whisky process in principal industrial practices where they were sufficiently widespread to be of general rather than purely national interest in order to provide an overview of the whisky industry around the world. The chapters cover the science and technology of whiskies from materials to the finished bottle ready for delivery to the consumer. Other sections deal with the cereals in common use, the process of malting and the operations for transforming the malted or unmalted cereal grains into a fermentable extract. Fermentation, distillation, techniques of process control in the distillery, maturation, practices of blending and bottling and it is here, in the blending stage that the differences between whisky processes around the world become most apparent. The final two chapters deal with issues of economic importance to the industry - energy management and by-product treatment and disposal.
